Kinotakara

Kinotakara is Japan's latest product within health care therapy. The product name means "treasure of the forest" and is a result of 26 years of research on the trees' powerful life force and ability to survive the hardest conditions.

Toxin absorbent Kinotakara, formulated from the essence of Wood vinegar and other active ingredients, has a natural ability to absorb toxins from the body. This stimulates the body functions and contributes in cleansing the body from different toxins.

The ingredients are packed in small packages that are to be attached under your feet with special band aid. When blood circulates thereto, Kinotakara will absorb the toxin out thereby giving you healthiness.

Both eastern and western medicine recognizes the foot soles as pictures of the condition of our inner organs, and it is often treated as our second heart.

If you place Kinotakara onto the foot sole, it will stimulate the acupressure points under the feet. This can calm the nerves, increase blood circulation and with that let us have a better health.

Kinotakara can also be placed directly onto painful areas, but you should not use it on open wounds. Used on pain spots you should let Kinotakara be in use for 24 hours.

One package of Kinotakara consists of 10 pads and 10 band aids. The pads should be used under each foot for 5 nights and then you shall have a break for 2 nights before starting on next week.
